

COMPLEX EXAM

The complex exam is due at the end of the fourth semester. The requirements of the complex exam are the fulfilment of 8 subjects and at least 90 credits. The complex exams are arranged in the exam period. The last courses should be completed before the complex exam.

The complex exam consists of two or three exams (optional). The subjects should be in connection with your research topic or it should be a general subject (e.g. materials investigation, polymer chemistry and physics). A short (about 20-25 min) summary should be presented (ppt) about your research work, results, publications and plans. The aim of the work, the experiments and the results should be given in an integrated form, not as a history of the semesters' activity. An about 10 pages summary of the research work and a complete publication list should be submitted before the exam. The subjects of the complex exam, the oral presentation and the report should be completed in accordance with the supervisor(s).

As far as plans are concerned, it should be taken into consideration that the extension of the SH scholarship needs an application process. An additional scholarship for the preparation of the dissertation can be granted to the applicants, subject to the approval of this application. Without this additional scholarship, the students have to finish the whole PhD degree process within 4 years, for otherwise there is no further fund available to cover any cost of the prolongation of the student's stay.

Deadlines:

Submitting the complex exam application form: October 31, March 31;

Submitting the research report and the list of publications: December 15, May 15;
